N.B. – Queste tabelle sono interamente automatiche e basate su algoritmi proprietari. I segnali vanno intesi come la fotografia tecnica e ciclica della situazione attuale. I segnali, i rating e le indicazioni variano al variare delle condizioni e in particolare del trend mensile, del trend trimestrale, della posizione ciclica e degli indicatori tecnici. Per quanto attiene i singoli strumenti (ETF e titoli), i segnali positivi/negativi hanno valore in relazione al contesto del mercato cui appartengono (es.: un segnale BUY su un titolo italiano avrà maggior valore in un contesto di trend positivo dell'indice, così come un POSSIBILE SHORT in un contesto negativo).
